

1. DATE - TIME GROUP 14 November 64 15/0327Z	2. LOCATION Brooklyn, New York
3. SOURCE Civilian	10. CONCLUSION Astronomical (METEOR)
4. NUMBER OF OBJECTS One	Form 164 sent. Object has speed and flight characteristics of meteor but no tail and not very bright. Very likely a meteor. IF form is submitted case will be reevaluated in light of the additional data.
5. LENGTH OF OBSERVATION 2 -3 Seconds	11. BRIEF SUMMARY AND ANALYSIS Object streaking across sky. 1st mag bluish white color. No tail, looked like satellite except much faster. Flight from Orion (25 deg elevation) to the horizon in 2-3 seconds. Orion at 115 deg azimuth. Object was round and small like a star.
6. TYPE OF OBSERVATION Ground-Visual	
7. COURSE Falling	
8. PHOTOS <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
9. PHYSICAL EVIDENCE <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	

FORM
FTD SEP 63 0-329 (TDE) Previous editions of this form may be used.

24 November 1964

Dear Mr. ~~XXXXXXXXXX~~

This is in reply to your recent letter in which you reported observing an object in the sky.

Attached is an FTD Form 164. It is requested that you complete the form in the greatest detail possible and return it to this office for further evaluation.

Sincerely,

MASTON M. JACKS
Major, USAF

patented 17 Nov

Sirs:

On ~~Saturday~~¹⁴ night, 10:37P.M EST in New York(Brooklyn) I sighted an object streaking across the sky. It seemed to originate(as if it was turned on by a switch) very close to the star Betelguise in the constellation of Orion. The direction in which it traveled was from Betelguise to the 3 stars in its belt, and towards the horizon. It was fairly bright(about 1st magnitude) and the color of the star Rigel-a bluish white. It was round and was very small-the size of how a star appears. It was moving pretty fast-it went from Betelguist to the horizon in about 2-3seconds. It had no tail at all, and actually looked like a satellite would look but it was much faster. I have a fairly good knowledge in astronomy and so I made a list of things it could possibly be and checked out all of the objects that could not appear as that did. I have down: Comet-no-no tail and too fast; meteor-no-too slow and no tail; satellite-no-no listings in any paper; balloon-no-you can only see balloons one-half hour after sunset and this was in the middle of the night; airplane-no-no blinking lights, no outline of plane, no noise, too fast. As you see I have checked off most of the things it could possibly be. I called up the Air Force Base (Floyd Bennet Field) and they told me to write to you. I hope you can find out what it was as I am very curious.

Thank you very much,

~~Robert Bremer~~

Sir:

On Saturday night, 10:37P.M. EST in New York(Brooklyn) I sighted
an object streaking across the sky. It seemed to originate(as it
was turned on) very close to the star Betelgeuse in the
constellation of Orion. The direction in which it traveled was two

degrees to the left of the star. It was very bright and it was

fairly bright about 10:37P.M. EST. It was white.

It was white. It was white. It was white. It was white.

It was white. It was white. It was white. It was white.

It was white. It was white. It was white. It was white.

It was white. It was white. It was white. It was white.

It was white. It was white. It was white. It was white.

It was white. It was white. It was white. It was white.

It was white. It was white. It was white. It was white.

It was white. It was white. It was white. It was white.

It was white. It was white. It was white. It was white.

It was white. It was white. It was white. It was white.

It was white. It was white. It was white. It was white.

It was white. It was white. It was white. It was white.

It was white. It was white. It was white. It was white.

It was white. It was white. It was white. It was white.
